

3D Wood

Structure, character, depth and a rustic appeal: those are the characteristics which wood obtains when it has been machined by a Boere Select X-Line brush texturing machine. Texturing gives wood a more natural look. Thanks to the oscillating brush system the wood grain will be smoothly followed resulting in a stripeless and soft feeling finish. The first unit of the X-Line sands across the grain giving the wood a sawcut or scarved look. The re-

sult is very effective and gives the wood another dimension. Boere presents this newly developed Select X-Line brush texturing machine at the Ligna. Various product samples will show the many possibilities which can be realized on solid wood and on veneered panels. In the meantime the machine is very popular within the flooring, furniture and joinery industry.

WINTERSTEIGER
Thin-cutting solutions.

Discover our Product Highlights 2013

DSB Twinhead NG XM

- The next-generation thin-cutting band saw with multiple modules
- Extremely high capacities with maximum of flexibility
- Up to 6 saws in modular twinhead layout

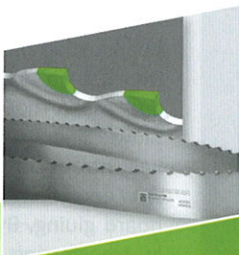

TRC Timber Repair & Cosmetics

- Perfect repair in only one process
- Perfect hold of the filling material, independent of human skills
- Semi and fully automatic machines

Stellite® and Carbide-tipped Band Saw Blades

- Cutting kerf from 1.1 mm
- Highest precision
- For any type of wood

leitz

We shape the future

Making processes more intelligent.

Process optimisation and process acceleration are key to efficient production. Leitz supports you all the way through your manufacturing process from top level consultants and engineering capability to tools, tooling system solutions, tool maintenance as well as complete Tool Management. So Leitz provides you with an optimised workflow with a higher process intelligence. Visit Leitz at Ligna and be inspired.

Shape the future with us.
