

## TRAJECT PARKET INVESTS IN 3 THIN-CUTTING BAND SAW MACHINES WINTERSTEIGER SUPPLIES CUSTOMIZED SYSTEM

# WINTERSTEIGER

Thinking about tomorrow.

The team from Traject with the new WINTERSTEIGER system: The 3 thin-cutting band saws DSB Compact XM are connected and produce precisely fitting parquet lamellas.

At Traject Parket in Barneveld, the Netherlands, 3 new thin-cutting bandsaws DSB Compact XM work inline. The compact system fits perfectly to the parquet flooring manufacturer – in terms of capacity and limited space availability at the production site.

The new thin-cutting band saws from WINTERSTEIGER replace a band saw and a frame saw from a competitor. In future, Traject Parket will work with WINTERSTEIGER machines only.

**Martijn Dijkstra, Co-owner and Head of Sales and Development, explains:** "We looked at different brands and types and discovered the DSB Compact XM at EE-Stairs, a company we know. We were impressed with the quality and ease of operation, so we chose this model."

With the 3 DSB Compact XM, Traject Parket produces about 800 m<sup>2</sup> of engineered flooring per day in dry cut. Oak wood mainly is processed. "The speed and cutting accuracy, the super thin cutting kerf, as well as its user-friendliness in combination with the utmost work safety are what make the DSB Compact stand out. The machine is very easy to operate," says Martijn Dijkstra, listing the advantages of his new bandsaw line.

Beside the advantage of the semi-automated feeding magazine, Martijn Dijkstra also appreciates the remote maintenance option, which allows WINTERSTEIGER customer service to connect directly to the machine via remote system: "Everything worked perfectly, cooperation with WINTERSTEIGER is great – from consultation to delivery, commissioning and training."
