

showcased their solutions for the wood and furniture industry, the woodworking trade and the primary sector. The response from Germany and all over the world was correspondingly high: 80,000 visitors from 160 countries informed themselves about intelligent machines and resource-saving production processes. WINTERSTEIGER Woodtech was in the middle of it all with its innovative solutions for thin-cutting and surface treatment.

WINTERSTEIGER brings "World of WOODTECH" to Hannover

For this year's Ligna trade fair, the Upper Austrian company WINTERSTEIGER AG has hired three stands with a total surface area approaching 900 m²: The machine and plant engineering company touches down in Hannover with six machines for the thin-cutting of wood and processing of wood surfaces as well as two new saw blades. In the outdoor area, three SERRA sawmills are doing live demonstrations, with information on automation solutions in sawmill technology completing the offering.

Precision Thin-Cutting of Wood for every need.

The company's slogan is "Discover the World of WOODTECH". With this world continuing to grow, WINTERSTEIGER boasts a wide range of products for wood working and processing, including customized automation solutions.

WINTERSTEIGER had four machines for precision thin-cutting of wood on display at Ligna. The newest model is the DSB Twinhead Pro XM thin-cutting band saw for high capacities. This band saw with two saw models was developed for precision cutting of hardwood and softwood in the dry and wet cutting process and stands out as a high-speed option. Another plus point is that it is digital: By connecting the machine to the myWINTERSTEIGER cloud, it offers automatic bearing monitoring for preventative replacement, automatic block width measurement, and relevant plant data collection.

With its DSB Compact XM, the Innviertel-based company is showcasing the entry-level model for the precision thin-cutting of wood. The third band saw machine, the DSB Singlehead NG XM, falls between the first two in terms of capacity. The unique feature of this DSB Singlehead is its 400 mm cutting width: This model was originally manufactured at the request of a customer and has been in high demand ever since, with the machine now being included in the brand's standard product range.

Not forgetting frame saw blade technology for the most economical thin-cutting. The DSG Notum thin-cutting frame saw is also on exhibit - with over 200 machines sold across five continents, this model is a true success story.

WINTERSTEIGER

LIGNA 2023: 5 days, 1,300 companies, 80,000 visitors

LIGNA 2023, the world's leading trade show for woodworking and wood processing, offered 5 days of innovation, inspiration and networking. From May 15 to 19, 2023, 1,300 companies from 50 countries
