

Production of profiles, now as of radius 0.00 mm

With its overall solution for profile sanding ARMINIUS has set another milestone. The latest development enables the sanding of sharp-edged profiles. The process safety required in sanding, in particular in case of sharp-edged profiles, will be guaranteed.

With the sanding equipment true to line, the impact factor of the individual abrasive grits is equally distributed over the predetermined profile. With this precision tool, users obtain a constant sanding result.

With its subsidiaries in the USA and further trading partners worldwide, ARMINIUS headquartered in Germany as the leading manufacturer of high-quality products has been represented around the globe since the 1960s.

ARMINIUS develops precision tools that guarantee constant compliance with the profile outline. The individually manufactured sanding tools ensure the required lead times without reworking. The compa-

ny ARMINIUS offers high-efficiency solutions from a comprehensive portfolio of innovative and reliable sanding systems.

In order to fully realize the given potential, customers are provided with advice around the use of tools and they are supported with the implementation of the pro-

spective projects. Existing or planned manufacturing processes, machinery and tools will also be integrated. According to the users' wishes, the implementation of the measures may be carried out in the production facility by the qualified personnel.

WINTERSTEIGER innovations at the LIGNA

The special machine manufacturer Wintersteiger will be presenting its entire product range at the LIGNA from 11th to 15th May in Hanover, Germany. In addition, the company will be introducing two of its innovations for the first time worldwide at stand E48 in hall 12.

The world's leading trade fair for the forestry and wood industries provides the right backdrop for both premiers. Firstly, for the new DSB Compact 310 thin-cutting band saw: this machine is Wintersteiger's offer for getting started with thin-cutting.

And secondly for the new Banso X-Cut band-saw blade that Wintersteiger has developed: the saw blade with blade widths from 27 – 55 mm convinces with a significantly longer service life in comparison to tooth-tip hardened saw blades and there-
