Drytech

More than just storage.

Unlike normal cabinets, Drytech lockers provide your employees with the additional benefit of professional and efficient drying of their work clothing and equipment.

In addition, the Drytech hygiene function reduces germs and odours. The lockers can be controlled individually and dry items within freely definable time periods. For example, this means that work clothing, shoes, and boots can be warmed up before your employees begin work or dried during break times.

The ECO technology. Energy efficient condensation drying.

As well as recirculation drying, Drytech drying solutions also offer highly energy efficient and economical condensation drying. The lockers use up to 60 % less energy than comparable products!

During condensation drying, moisture is condensed on side-mounted copper tubes that form part of a closed coolant circuit. The condensed fluid is either collected in a water tank on the back of the device or fed back into the wastewater system, provided that a connection is available.

The hygiene function.

Make germs and unpleasant odours a thing of the past!

An important requirement for our drying systems is that they must be able to remove microorganisms such as germs and bacteria from work clothing and equipment and rid them of unpleasant odours.

In cooperation with our customers, WINTERSTEIGER has performed many tests and thus can offer a particularly efficient solution for germ reduction using ozone.

react with the "odour molecules". Disinfection is carried out using ultraviolet radiation that is provided by sequentially switching on an ozone lamp in the supply duct of the drying system. The circulation of air ensures that the ozone reaches all areas. The remaining ozone breaks down into oxygen in a matter of minutes. This hygiene function can also be used effectively with textiles that are not washable.

The positive side of ozone.

Ozone is an oxygen molecule made up of 3 atoms that has the ability to give off one of these oxygen atoms and

Wide range of equipment variants for greater flexibility.

There are a wide range of equipment variants available for each type of locker:

- PLC control system / digital control system
- Analog timer clocks
- Ability to switch between ambient and warm air drying
- Variety of power levels for warm air drying
- Intelligent locking and unlocking systems

What else does Drytech have to offer?

Air dehumidification in changing rooms.

All our lockers are designed to have optimum air circulation to ensure the best possible drying results. They also have recirculation or condensation systems to remove the humid air. Ventilation systems are therefore not required in changing rooms.

Controlled drying.

The temperature is continuously monitored and heating elements keep the temperature in an ideal range for drying textiles as gently as possible. A range of control options allow the drying system in the individual cabinets and lockers to be set so that they are only in operation during the required times, saving both time and money!

**Durable and well thought-out.**

The lockers have a robust design and are made from high-quality sheet steel, ensuring durability. The optimized design means that our drying solutions are even suitable for small spaces.

**For health and well-being.**

Professionally dried work clothing and equipment promotes well-being among your employees and therefore increases their motivation. There is also room to store private items as well as work clothing.

**Also available in stainless steel.**

WINTERSTEIGER can also provide stainless steel versions for the food industry and other sectors where stainless steel is required for hygiene reasons.

Fields of application.

Solutions for drying, disinfecting and neutralizing the odour of clothing and kit, such as jackets, trousers, boots, gloves and helmets.

Shipbuilding / maritime sector

Fishing

Infrastructure (roads, railway, airports)

Food industry

Firefighting

Military and police

Energy suppliers

Chemical and pharmaceutical industry

Public utilities

Construction industry

Production and maintenance

Forestry

Farming

Sports clubs (football, tennis, riding)

Private households

WINTERSTEIGER. A Global Player.

WINTERSTEIGER AG is an international machinery and plant engineering group. Founded in 1953, it has gradually established itself as a leading provider of innovative solutions for customers in technically sophisticated niche markets. The business fields of the company consist of:

■ SEEDMECH

- Turnkey solutions for plant breeding and research

■ SPORTS

- One-stop supplier for ski and snowboard rental and servicing
- Systems for hygienic drying of sports goods and work clothes
- Custom solutions for feet

■ WOODTECH

- Process solutions for precision thin-cutting, wood repairs and cosmetics
- Saw blades for wood, food, and metal
- Machines for mobile and stationary sawmills

■ METALS

- Levelling technology machines and systems

■ AUTOMATION

- Plants and automation solutions for industrial manufacturing companies
