

Saw Blades For Saw Mills

Complete range of products

The Leuco saw blade program stands for excellent results with regard to edge life, cutting quality and process safety in saw mills. There are several advantages of the saw blades.

- Surface treatment of the tool bodies for less friction. Less friction means that less heat can penetrate the tool

body. Thanks to the surface protection less resin can be deposited on the tool body.

- Tool body quality of the program: lower risk of sawing untrue and thus higher process safety
- The saw blades are perfectly suitable for sawing frozen wood.

A Powerful Combination: Thin Cutting Technology And Wood Surface Repairs

Wintersteiger invites visitors to Booth No. 8-506 at Holz-Handwerk in Nürnberg (March 26 - 29, 2014) and will be presenting the leading thin-cutting technologies in machines and tools as well as the latest product innovation "Timber Repair & Cosmetics". TRC means wood surface repairs to the highest quality standards accompanied by huge potential for rationalization. On display at the show will be the semi-automatic TRC-M Easy entry-level model, the DSB Singlehead thin-cutting band saw and BANSO band saw blades for mobile sawmills and joiner, resaw and log band saw blades. With a friendly atmosphere guaranteed, their team will be available for individual talks and an exchange on current trends in the field of wood cutting and filling technology.

Information about the Business Unit Woodtech

Wintersteiger is known for advanced thin-cutting technology that is used worldwide in the production of lamellas. The thin kerf, high accuracy, a surface to glue and processing the lamellas without additional steps are key benefits for users. The product line includes thin-cutting frame saws and thin-cutting band saws including upstream and downstream processing, blade sharpening machines, carbide and Stellite® saw blades, and technologies for gluing and pressing.

The semi-automatic TRC-M Easy entry-level model of the "Timber Repair & Cosmetics" product line.

Their thin-cutting solutions for wood are used in the production of lamellas starting with 1.5 mm thickness. Among the customers are manufacturers of en-

gineered flooring, doors and windows, multi-layer boards, pencils, musical instruments, etc.

"Timber Repair and Cosmetics" was added to their product range following the majority takeover of VAP Automations GmbH in November 2012.

Information about Wintersteiger AG

Wintersteiger AG is a special machine builder based in Upper Austria and has concentrated on niche markets since its foundation in 1953.

Wintersteiger's headquarters in Ried im Innkreis, Upper Austria, 20 major branches, and 60 representative offices deliver to no less than 130 countries worldwide. This takes Wintersteiger's export quota to around 90 %.
