

Triangular track and wide rear tires for the Quantum

The large ground contact surfaces of the Quantum plot combine's integrated triangular track not only increase the machine's stability, they also help protect the soil.

The basis of a good harvest is a healthy and fertile soil. That's why WINTERSTEIGER set itself the goal of ensuring the soil is protected while harvesting. The triangular track and the wide rear tires allowed for significant improvements in this respect.

Your benefits summed up:

- High driver comfort thanks to improved driver stability with triangular track and wide rear tires
- Stable tracking thanks to smooth handling
- Efficient ground drive due to large ground contact surface
- Minimal soil compaction/cm²
- Lower power requirement due to reduced tire sinkage
- Improved traction and reduced slippage
- All-wheel drive
- Turning circle < 10 m
- Wide rear tires also available in conjunction with standard front tires (2WD and 4WD)

Technical data

Tire width	308 mm (12")
Triangular track length	1124 mm (44")
Triangular full track system width	320 mm (12,6")
Max. speed with triangular track	13 km/h (8 mph)

We reserve the right to make technical alterations.
