

Either or! The correct edge sharpness can decide whether your client's next ski day will be a gripping experience or an embarrassing succession of slips and slides.

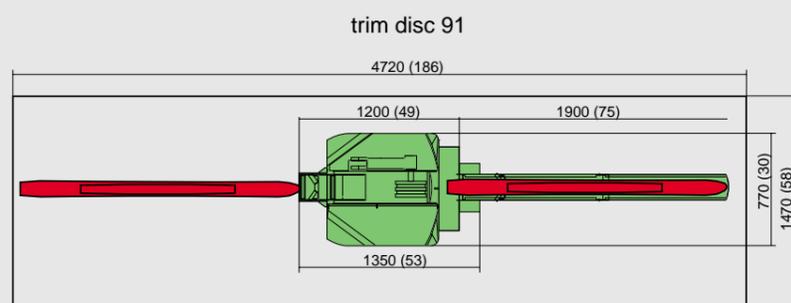

With trim disc 91 you can vary the side edge angles between 87° and 90° to match every skiing ability. And with the application of trim disc 91 a precise base edge angle grind between 0.7° and 1° is possible. This guarantees that all skiers, from beginners to experienced racers, will have more fun and more confidence even on hard and icy slopes.

Confirm your customer's faith in your know-how. Get the only service machine that can reproduce the finish of today's high performance skis with professional all around service. You can depend on WINTERSTEIGER, your experienced partner.

Technical Specifications

	trim disc 91
Weight	285 kg (688 lb)
Grinding Disc	Ø 150 x 40 mm
Ski Length	1000 - 2400 mm
Ski Width	55 - 140 mm
Tank Capacity	60 liter (16 gal)
Working Height	920 mm (36 inches)
Sound Level	84 dB (A)
Feed Speed	2 speeds: 2,3/4,6 m/min
Compressor (needed):	
Liter Output	30 l/min (1 CFM)
Air Pressure (min)	6 bar (90 psi)
Power	2,8 kW
Connected Load	380 - 415 V 50 Hz
Rated Current	10 A
Fuse Protection	10/16 A
Power	3,1 kW
Connected Load	208 - 230 V 50/60 Hz, 3 AC
Rated Current	14,2 A
Fuse Protection	16/20 A

WINTERSTEIGER

Ⓔ

For the great performance in smallest spa

Skiers. Carvers.

They all want to enjoy their lives and their favorite sports in every possible way. They all want to keep the taste of freedom and adventure close by. Neglected and poorly maintained equipment can quickly spoil the fun. Confirm the faith your customers have in you. The grinding and tuning model trim disc 91 is the ideal compact blend of the most advanced edge finishing technology, high efficiency and easy serviceability. With very little effort, the ceramic discs can be precisely set to suit the individual demands of every ski. Disc grinding and finishing gives those dull edges a bite again and brings your dead equipment back to life. You now have the tool to be a professional all around service partner, making satisfied skiers out of your new and old customers.

trim disc 91

test per- the nce

At a glance.

With the clearly designed and easy to operate control panel of trim disc 91, many work parameters can be set up precisely without any complications.

trim disc 91 allows you to offer state of the art edging service to your customers using the smallest possible space. Pneumatic centering guarantees you perfect guiding of the ski during the entire finishing process. The two sided disc process raises the efficiency level. The WINTERSTEIGER disc system reproduces the newest grinding technologies of all the major ski factories. You will also satisfy the needs of the most demanding racing competitors with the most precise edge finish available.

Ceramic Disc Finish for alpine and shaped skis. The ceramic grinding discs process the material equally on both sides. With a precisely centered ski and the constant pressure feed you can attain a perfectly finished edge.

The ceramic disc procedure ensures the precise edging geometry, and the exact grind angle throughout the entire ski length.

Confidence and the joy of skiing are enriched by the precise setting of the edging geometry. trim disc 91 allows you to change the grinding discs from side edge processing to base side edge processing with the simple touch of a button. This saves time for you and your customers.
