Tension Master

Saw roller device - Location Ried im Innkreis

Year of construction: 2014

Saws must be tensioned with great force in order to achieve even cutting quality with thin-cutting saw blades. The introduction of this tensile stress into the saw's tooth area is particularly important as it is there that the cutting forces occur.
Benefits: optimum tension in tooth area, greater cutting accuracy, increase in service life of thin-cutting saw blades

Voltage: 3x40–415V/50Hz
Number: GSO-0883-B (5835)
